Some Seeds Sold Out . . . Others Going Fast

It will pay you to **ORDER NOW!**

Already, at this early date, the seed scarcity is severe. President Truman's warning has also helped speed up seed demands, all along the line. RED Clover, Alsike, Mammoth Clover, Alfalfa—are all gone. Some other items will not last long. . . . Don't delay orders for later-planting seeds—maybe your usual ordering time will prove too late this season. Read over these items carefully . . . they show you up-to-the-minute facts.

"VICLAND" OAT SUCCESS HAS BOOSTED DEMAND 500% IN YEAR!

It's a fact! Up to this time our orders total five times the Vicland Certified seed handled last year. Two BIG reasons caused this demand. In the past two years Vicland has really PROVED it's the right strain for this area provided the seed is right. And this year there is EXTRA evidence that this seed IS right. One supplier's crop of 350 acres averaged 77 bushels to the acre. All of this Vicland seed is Northern grown, plump, heavy, good color, germination high. It's the REAL THING and our friends have proved with their extra early orders they don't want to miss it.

Vicland's big point is its remarkable disease resistance. Loose and covered smuts, leaf and steam rusts were once the ruin of many a promising stand. But the man with Vicland needn't worry. Even in bad oats years, when neighbors' fields were disease-crippled, Vicland was coming through with 50-60-70 bushels to the acre. Letters after letters have come from amazed growers telling of remarkable experiences. Here is the seed situation on Vicland today: we still have some Certified seed—not much, but enough to meet prompt orders. Also excellent Vicland, uncertified. Get this real VICLAND from high-production parent stock. GET YOUR ORDER IN AT ONCE.

"Victory" Oats

For the hundreds and hundreds of friends who have always gotten big yields out of Victory Oats, here is seed of excellent quality. Victory is a heavy producer. Often yields 8-10-20 bushels per acre over other nearby oat fields. Vigorous grower—longer straw—large grain.

This is a year when you want all the feed you can produce. Consult price list and order NOW!

Use More Ladino!

A little of this perennial clover goes a long way—and does remarkably big things. It's being recommended today by agricultural authorities for three out of every four mixtures for hay or pasture (see page 41—your Hoffman Catalog). Shortage of alfalfa and some of the clovers is causing extra demand for Ladino mixtures. While more Ladino seed is available than several years ago, use is multiplying fast. Better order seed for your mixture while we can assure delivery.

GOOD Timothy Isn't Too Plentiful!

You may be inclined to doubt it when every seed source has seed for sale. But this Hoffman "Farmer's Choice" Timothy is averaging 99% in purity tests. It is live, hardy seed—highest germination. Don't take a chance with "just any" Timothy—either straight or in mixture. A few cents a bushel makes a BIG difference.

Alsike and Timothy

In the Clover shortage, A. & T. offers folks the chance to get some Alsike into their hay that isn't available otherwise. Good clean seed—high germination—but there isn't much of it. In normal years we could mix on call, but now no Alsike means no A. & T. mixture when our present supply is gone.

Pasture Grass Situation

Price list shows practically all grasses still available for most all of ordinary needs. Note particularly the following items.

PERMANENT PASTURE MIXTURE. Blended specially for heavy, lasting pastures in this area—after long observation of various grass combinations and pasture practices. A Highland or Lowland mixture. In the present seed situation (no reason to believe it will improve for a year or so) it will pay to plan for good pasturage.

LINCOLN type Brome Grass. Rapidly gaining favor because it has a lot of farm uses. Read page 39 in your Hoffman Spring Catalog. Here is a supply of excellent adapted Brome seed (Lincoln strain). Don't take a chance on other kinds—some won't do well hereabouts. See Planting Guide for descriptions.

Canada Peas

The good old practice, planting Canada Peas with Oats for fine early green feed could be of help while your later feed is in the making. Sow soon as ground can be worked.

World Learning Soil Protection of Rye Grass—Exports Heavy

Provide good heavy covers for your corn field—potato ground—garden. Great anti-leaching and green manure qualities. Heavy matted root systems that come from vigorous, clean Hoffman seed. Call is heavy. Even if not needed till last corn cultivation, order now at no premium for its excellent quality.

We have just learned that millions of pounds of Rye Grass are being exported this spring to farms in other countries.

Time to Order Soy Beans

Early orders are way ahead of previous seasons—reflecting fears of seed shortage later. We expect to meet later needs, but to be safe, suggest your needs soon as you can. Here is the **WILSON BLACK**—grown for its excellent hay production, two to four tons per acre. **LINCOLN.** Outstanding variety—heavy producer of beans which average higher oil content. Call for Lincoln is very big this year.

CHIEF. An excellent bean variety for a 120-day season. Stiff straw. Beans do not shatter easily. Planted by many folks along with their ensilage corn. Recommended.

How About Potatoes?

Here's a tip: With feed needs getting main attention, for meat and milk—the acreage for potatoes may fall off. This has always been the signal for good market prices in the fall. Some extra ground in spuds COULD be a very good cash crop. Here is excellent seed—reliable producers.

Sudan as Predicted

The Hoffman Spring Guide said seed for Tift and Sweet Sudan would likely be short—and it is. We are fortunate in having a fair supply of Regular, Tift and Sweet Sudan, and expect to meet all needs. For some reason, the call for Sweet is over twice that of last year.

Sweet Corn—For Table or Market

Here's a good item for the home, and for nearby markets and restaurants. These Sweet Corn hybrids mature uniformly—a big advantage for market crops. Here is good seed, priced right. Order this item along with other seeds. See price list.

Send orders at prices shown in this folder. If item is not shown it means that supply is already exhausted.

A. H. HOFFMAN, INC.
LANDISVILLE, PA. (Lancaster County)

THE FUNK G HYBRID SITUATION—READ CAREFULLY

Demand for this great corn has gone way beyond all expectations. Some G numbers for husking, particularly those for earliest sections, are practically exhausted. But we still have heavy-production SILAGE G numbers for every section, as well as some husking

varieties for the medium and later areas. *But do not delay!* Whole U. S. experience shows shortage of good seed. You can't gain by waiting—you may lose your chance to get your seed. We urge you to send us your order for husking and silage seed—immediately.
